

No Centralized Authority.  
No Corruption.

The  
**MEXICAN Stablecoin**

**MXNC**  
A DLI PROJECT

## A STABLE CRYPTOCURRENCY.

MXNC is a stable cryptocurrency usable by anyone. MXNC is an actual store of value represented as a cryptographic token on a purpose-built blockchain. MXNC is always backed 1:1 by the Mexican peso. All pesos are held in Mexican banks and are verified 1:1 by the board of trustees. For each MXNC created 1 peso will be deposited into Mexican banks. For each peso redeemed, one MXNC will be burned. The value always remains the same, hence the term Stablecoin.

## WHY MXNC?

As in all corporations, financial institutions, and any other system, there will always exist corruption, greed, and error. MXNC has the ability to significantly reduce and possibly eliminate all of these problems. By eliminating these problems, we can restore faith in financial institutions, corporations, and provide one single source of truth, with no centralized authority.

The Mexican Stablecoin project was conceived from a year's worth of meetings and interviews with top Mexican officials, C-Level executives and directors of several fortune 500 companies, and groups advocating for the poor and indigenous people of Mexico. MXNC has the ability to solve several economic issues within Mexico and to bring trust back to the people.

**MXNC is a combination of very positive factors from major cryptocurrencies, gold, and fiat combined:**

- MXNC is built for 100% up-time, using technology from Hyperledger Enterprise & Dash Cryptocurrency Blockchains. No downtime ever.
- MXNC is always available, usable by anyone, anytime, anywhere.
- MXNC costs fractions of a peso to use vs several % for all other methods.
- MXNC is instant, unlike wire and other forms of transfer that take days to confirm.
- MXNC is stable, backed 1:1 by real currency stored in real banks.
- MXNC is transparent, built on an open Blockchain, anyone can audit.

## SIMPLE AND EASY TO USE.

Each token is stored on the MXNC distributed, permission-less Blockchain. Any entity, end user, corporation, or government can utilize it to facilitate transactions and to transfer the value of a peso between any party worldwide, instantly. All transactions confirmed and settled within minutes, and are stored in the MXNC blockchain forever and immutable. This means there's no way to alter, change, or delete the transaction data. Any party can audit the blockchain at any time.

End user wallets work on all major platforms including Apple IOS, Android, Windows, and Linux operating systems. Wallets are built for mobile or enterprise use with the flexibility and controls necessary to make everyday use very simple and secure. A full API is available for enterprise partners to integrate MXNC directly into their existing application or infrastructure.

Any end user can run a full node on a simple virtual private server and utilize the node to quickly and securely transact with the blockchain network, or to continually audit all transactions, or both. Verified end user, government, and corporate entities can run a validator node. Validator nodes provide consensus and write the transactions to the Blockchain. Validator nodes continually earn a part of every transaction on the network. The Validator nodes are scaled 10000000:1 and are only issued in a manner that would never dilute any other validator node's potential earnings. For every 10,000,000 MXNC there will be 1 additional validator node added to the network.

MXNC provides the purpose, the platform, and the technology necessary to overcome critical financial, economic, and political issues.

## WHAT IS A STABLECOIN?

What is a Stablecoin? Stablecoins are cryptocurrencies designed to minimize the effects of price volatility, thus they function as a store of value and a unit of accounting. To minimize volatility, the value of a stable coin can be pegged to a fiat currency, or to exchange traded commodities such as precious metals or industrial metals.

## VALUE

MXNC will always be pegged to the Mexican peso at a ratio of 1:1. At any time MXNC can be purchased directly from the trust and can be exchanged with the trust at a 1:1 ratio.

## BACKING

MXNC will be fully backed by pesos, gold, and/or other assets held in the trust.

## TRUST

MXNC is built on a purposeful Blockchain with full nodes. These nodes can be utilized by any party to transact with and audit the network. MXNC has many positive qualities if the top cryptocurrencies.

## VALIDATION

MXNC operates on validator nodes which serve to validate transactions and provide consensus to the network. Validator nodes are independently selected by the trust. Each validator node earns a small fraction of the transaction. Validator nodes will be scaled up economically based on a ratio set by the Board of Trustees.

## ARCHITECTURE

MXNC is based on a hybrid POS architecture that allows for the speed and scalability of POS and the security of POW.

## DEVELOPMENT

All development is in collaboration with DLI & a Mexican joint venture. Development funding is derived from 30% of validator node proceeds.

## MINT & BURN

All MXNC is to be minted on purchase and burned upon reclamation. This process is controlled by the Board of Trustees.

## BOARD OF TRUSTEES

The Board of Trustees is made up of trusted Mexican citizens and business people. The Board is the trust side of the organization and has one major responsibility. The independent Board of Trustees oversees the mint and burn process. They verify pesos are in banks 1:1 to back the MXNC coins issued.

## CROSS PLATFORM

Anyone can run a node and therefore transact with the network, and/or audit the ledger. All transactions are stored on the ledger after validation by the validator nodes. MXNC is also cross platform and operates on multiple chains. For example, MXNC is also delivered as an ERC-20 token on Ethereum, yet all settlement is done on the MXNC network. This model would work across many other blockchains such as Stellar, Vechain, Zilliqa, EOS, and others as needed.

**MXNC** — Standard token to the main network.

**MXNC-E** — ERC-20 Token smart contract.

**MXNC-V** — Vechain Token smart contract.

**MXNC-S** — Stellar Token smart contract.

**MXNC-O** — EOS Token smart contract.

**MXNC-T** — TRON Token smart contract.

## ECONOMIC MODEL

Fiat Deposit fee:	0.1%
Fiat Withdrawal fee:	0.5%
Transaction fee:	0.1%

## PARTNERS & CLIENTS

**StableCoin Partner:** A person or entity who invests into MXNC for a financial, technical, and marketing perspective. Key partners own a substantial amount of MXNC, and will have the option to run a validator node. In most cases a partner will also be a client. Some partners would be: wealthy individuals, technology companies, banks.

**StableCoin Client:** These are end users of MXNC. Clients are any person, entity, corporation, or government who utilizes MXNC to facilitate and audit transactions.

Thank you for your interest in partnering  
with the team at Distributed Ledger Inc to  
create wealth and opportunity for the people  
and businesses of Mexico.
